(54) MEDIA CONVERTING METHOD AND STORAGE MEDIUM

(57)Abstract:

PROBLEM TO BE SOLVED: To enable even a terminal device with, e.g. small screen size to send an easy-to-see picture without processing existent content data on a terminal device or a server nor preparing processed contents data on the server side by performing media conversion matching the processing capability of the terminal device.

SOLUTION: The media converting method which accesses media data on a content server at a request from a terminal device and converts the media data to a desirable media kind by a media converting server includes a step wherein the media converting server accesses the media data on the content server instead at the request of the terminal device and converts the data to the desirable media kind and a step wherein the media data converted by the media converting server are sent to the terminal device.
